Your website care checklist.

A simple routine to keep your website useful, working, and up to date.

Start here: agree who handles what.

Some tasks may already be handled by your website platform, host, or care plan. Ask what is covered. A static website has different upkeep from a CMS, shop, or membership site.

Each month / Check the visitor experience

- [ ] Open the site on your phone and a desktop. Check your key pages and buttons.
- [ ] Send a clearly labelled test through your contact form. Confirm it arrives, then remove the test from any customer records.
- [ ] Check booking and shop links. Use test mode for payment checks where available.
- [ ] Review contact details, hours, service information, prices, and announcements.
- [ ] Click important links and check that images load without obvious problems.

Keep a short record

Date checked: _____ Checked by: _____

What needs attention? Who will handle it?

The pieces behind the pages.

Use the checks that apply to your setup. Your host or developer can help.

Each quarter / Review the essentials

- [ ] Confirm domain and paid-service renewal dates, payment methods, and account contact details. Keep the domain in your name.
- [ ] Confirm a recent backup of the site and relevant data exists. Ask how it would be restored; test recovery safely, away from the live site.
- [ ] Review who has account access. Remove access that is no longer needed and enable multi-factor authentication where available.
- [ ] Check who manages CMS, plugin, dependency, and integration updates. Back up and test significant changes before publishing.
- [ ] If you use analytics, look for useful patterns and check your main inquiry or purchase path. Low traffic alone does not mean the site is broken.

As needed / Do not wait for the next check-in

- [ ] Update changed hours, prices, contact details, services, and expired offers.
- [ ] Act promptly on trusted security or renewal notices. Open the provider directly rather than following an unexpected email link.
- [ ] Get help if forms fail, the site goes offline, checkout breaks, or an account shows unexpected activity.

Manage it yourself, or share the work.

You can handle routine content checks yourself. A care plan can take agreed hosting and maintenance tasks off your list. Confirm the scope and response times first.
